

Iacobucci HF, world leader in aero technology appliances, announces the launch of its new W|System, its innovative waste compactor system installed on board Canados Open 90 at Cannes International Boat & Yacht Show 2010

Building on its engineering aerospace know-how, quality craftsmanship and proprietary technologies, Iacobucci HF, the worldwide leader in manufacturing espresso machines and hi-tech appliances for most exclusive airlines and business jets, will launch in September 2010, in Cannes, a new built-in waste compacting systems specifically designed for an efficient use of the space on board a luxury yacht: the W|System. The built-in trash compactor, thanks to its small dimension, compacting force and patented carton boxes resolves the problem of waste on board during cruising and allows differentiated waste disposal.

For many years Iacobucci HF has provided high-tech, space-saving solutions for aircrafts, pioneering application of the most innovative and technological systems and materials. Exploiting its unique experience and engineering know-how, it created a revolutionary built-in waste-compacting machine – the W|System, which allows to reduce waste volume by up to 80% and, therefore, resolve the problem of waste disposal during yacht cruising. Applying an electro-mechanical system instead of the more commonly used hydraulic one, the W|System combines two tons of compacting force with low-level power consumption, performing to the highest standards of quality, efficiency and reliability. The W|System compact dimensions are ideal for installation on board a yacht, where space is limited. The clean and modern design of the product is aesthetically appealing and the perfectly integrated backlit touch-control panel ensures superb functionality, easy operation even in total darkness. Using specific patented water-proof carton boxes the W|System is suitable for wet and dry waste, compacting paper, plastic dishes, cutlery, aluminium cans, glass and even champagne bottles in one single box with a 3:1 ratio. Perfectly in line with an eco-sustainable philosophy the boxes are made of 100%.

W 302mm | H 635mm | D 499.5 | 39 kg Box W 210mm | H 285 mm | D 370 mm
CONNECTION 28 Vdc/220 VAC or 115 VAC with external power supply | CONSUMPTION 300W

IACOBUCCI HF Electronics SpA is a company with a 30 years experience in development, production, certification and maintenance of coffee machines and trash compactors for the international aviation market. Headquartered in Ferentino, Italy and with more than 100 highly skilled employees, the company serves and supplies the main airlines companies in the world and the most prestigious business jet manufacturers. Among its extensive clientele, IACOBUCCI HF supplies clients such as Emirates, Singapore Airlines, Lufthansa, AirFrance, Continental Airlines, Cathay Pacific Airways and the premier aircraft builders, Airbus and Boeing. IACOBUCCI HF products have been installed on board of the most elegant private jets (Bombardier, Gulfstream, Dassault, Cessna, Embraer, ecc), presidential and royal fleet including the American President one. In 2005, IACOBUCCI HF Electronics S.p.A. signed a strategic partnership with Nespresso brand, part of the Nestlé Group and as a result, the company developed a patented kit dedicated to the exclusive use of the new Nespresso Grand Cru, which guarantees the quality of the real espresso taste on board airplanes. Today IACOBUCCI HF Electronics is bringing its unique know-how and expertise into the world of luxury yacht with two innovative systems specifically designed to be on board.
