

W|SYSTEM

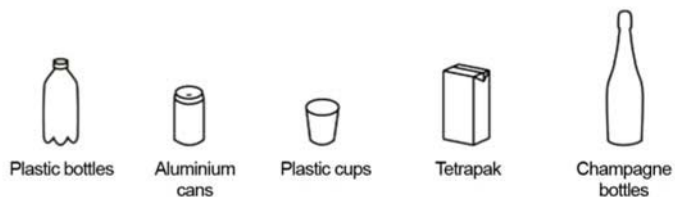

The W|System is the first built-in waste compacting system designed to optimize the use of space on board, reducing the volumes of extra waste and keeping it stored safely and tidily. Applying the latest aeronautical technologies, the W|System combines two tons of compacting force with low-level power consumption and thanks to its very compact dimensions it is ideal for installation on board the yacht, where space is limited. Made of high-resistant aluminium and using specific water-proof carton boxes it compacts in convenient and hygienic way non organic waste, including aluminium, plastic, glass, champagne bottles, paper, cans and tetrapack containers. Perfectly in line with an eco-sustainable philosophy the boxes are made of 100% recyclable material and they are predisposed for a differentiated collecting of waste.

The clean and modern design of the product is aesthetically appealing and perfectly integrated backlit touch-control panel ensures superb functionality, easy operation even in total darkness.

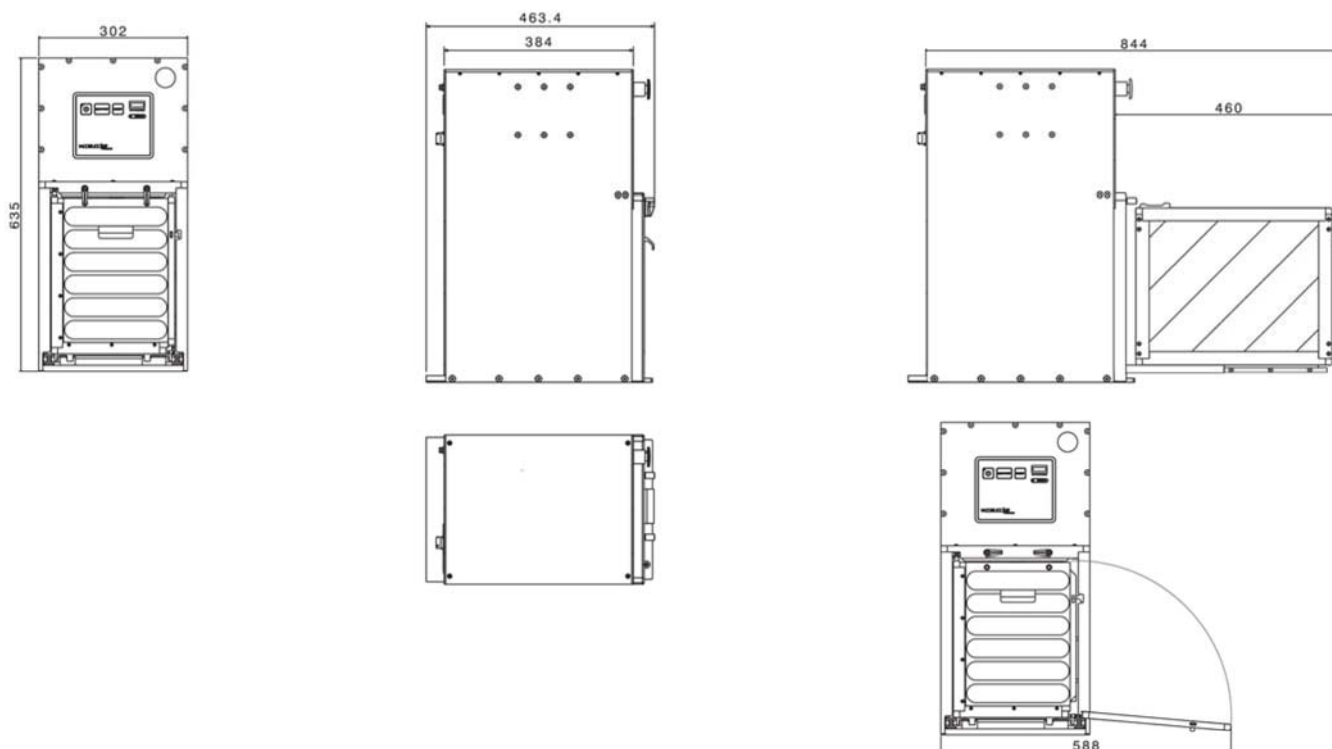

FEATURES

- Backlight touch – control panel
- Electromechanical waste compacting system
- Two tons of compacting force
- Power consumption 300W
- Connection 28 Vdc (20Vdc- 30.5 Vdc)
- Optional 220 Vac or 115 Vac with external power supply
- Internal disposable box of recyclable material (214x280x377)

SOME COMPRESSIBLE MATERIALS

Part Number	Width	Height	Dept	Gross weight	Empty weight	Compacting waste	Drawer capacity
HFWL2010-01	302 mm	635 mm	463.4 mm	42 kg	36 kg	6 kg	1 box
MB0000340 box	214 mm	280 mm	377 mm
